CLAMAV

Instalamos el clamav apt-get install clamav -y

Realizamos un escaneo del sistema mediante el comando clamscan

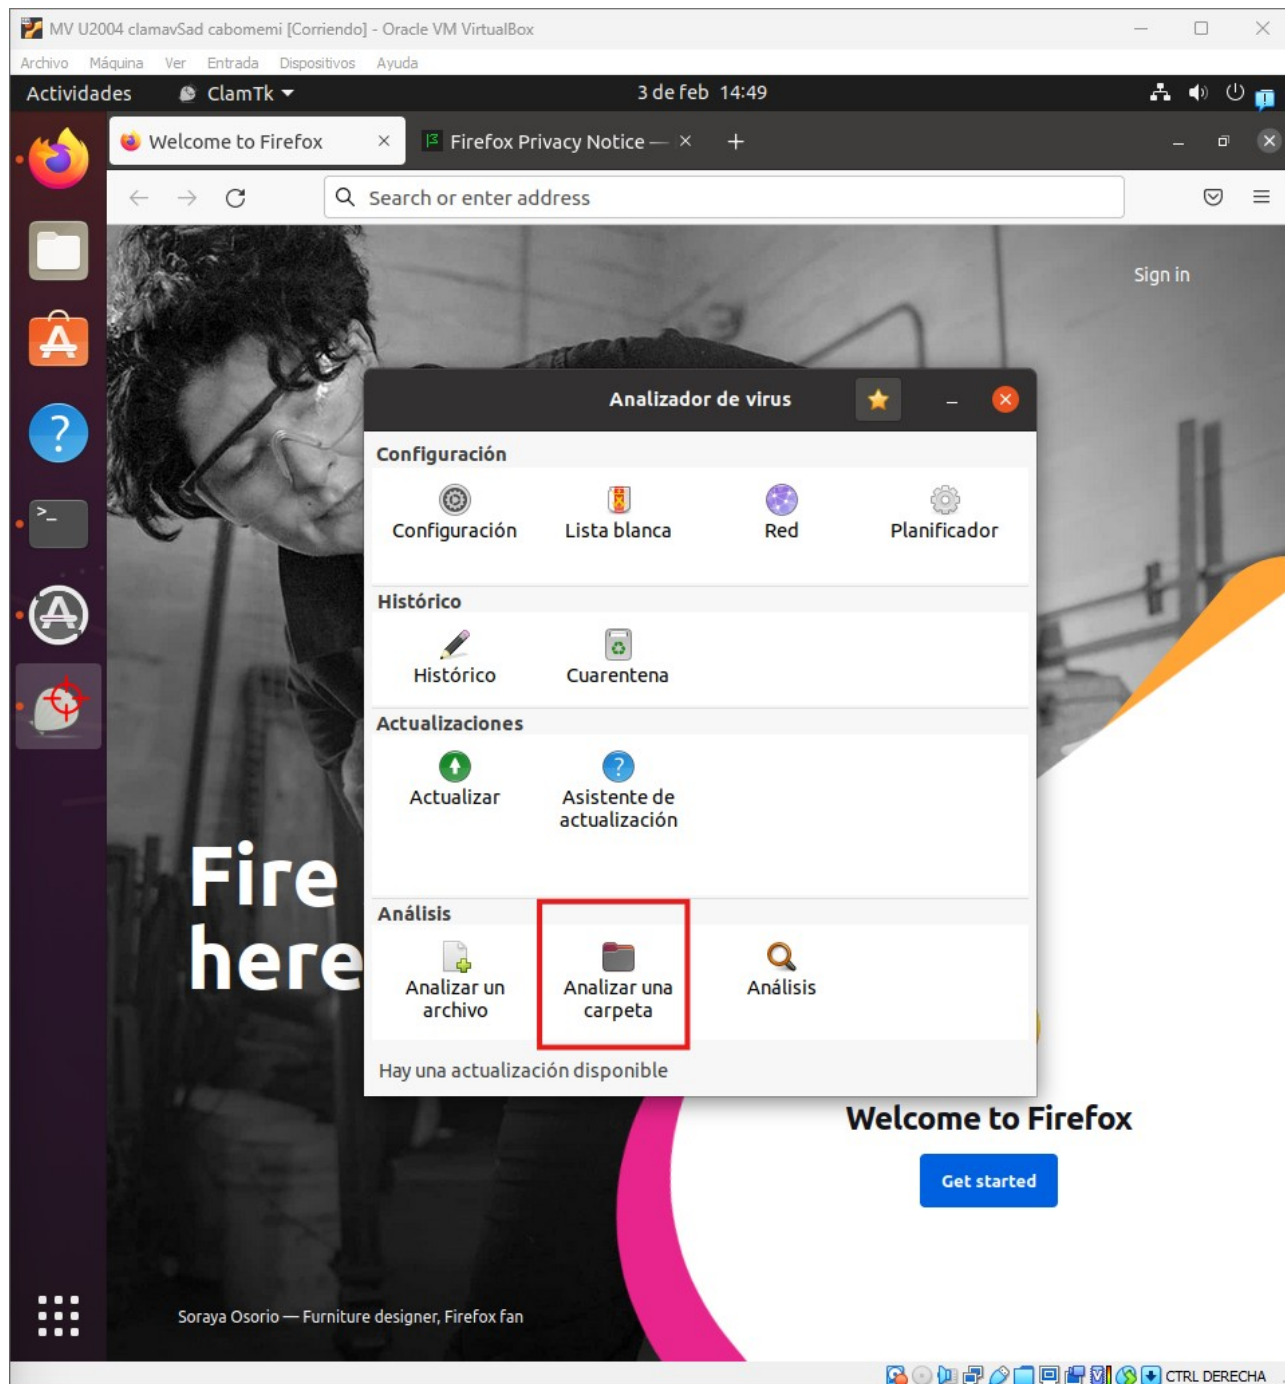

CLAMTK

Esta es la implementación gráfica del comando clamscan

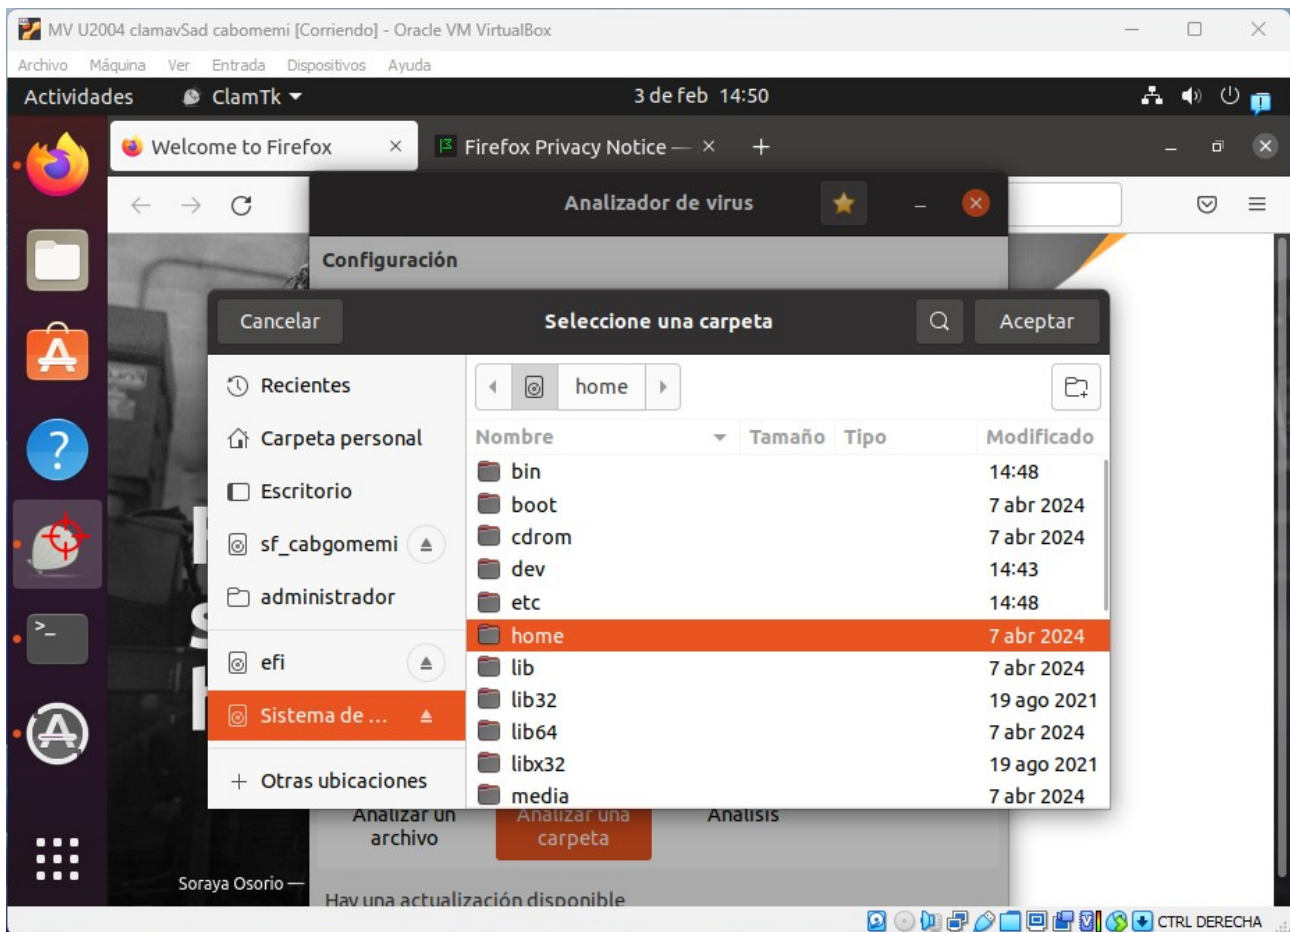

`sudo apt install clamtk-gnome`

Para ejecutar el clamtk ejecutamos en el terminal el comando clamtk

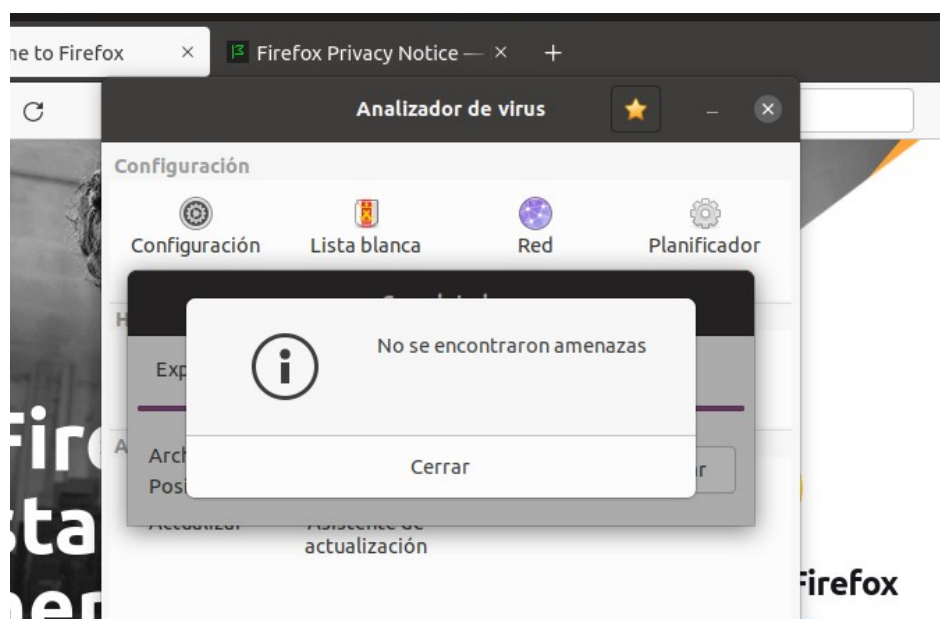

Para ejecutar un escaneo le damos a escanear una carpeta

Seleccionamos la carpeta home

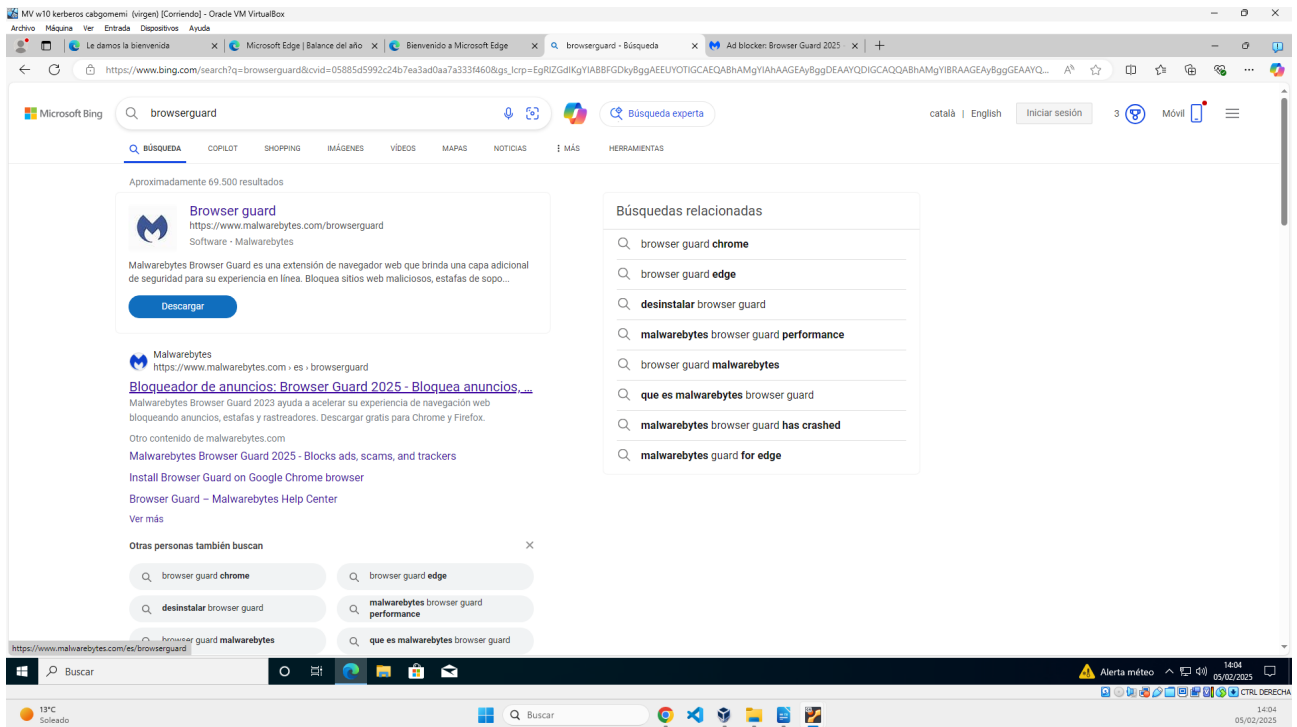

Escaneo completado

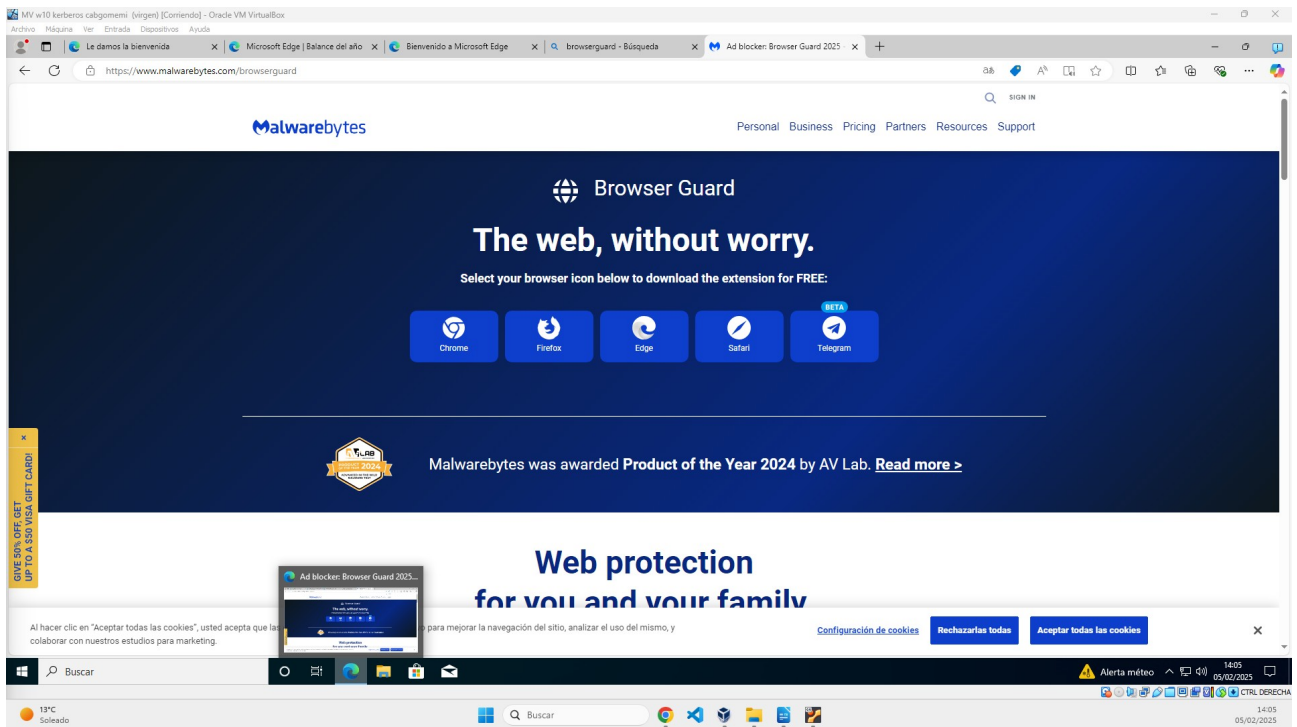

browserguard

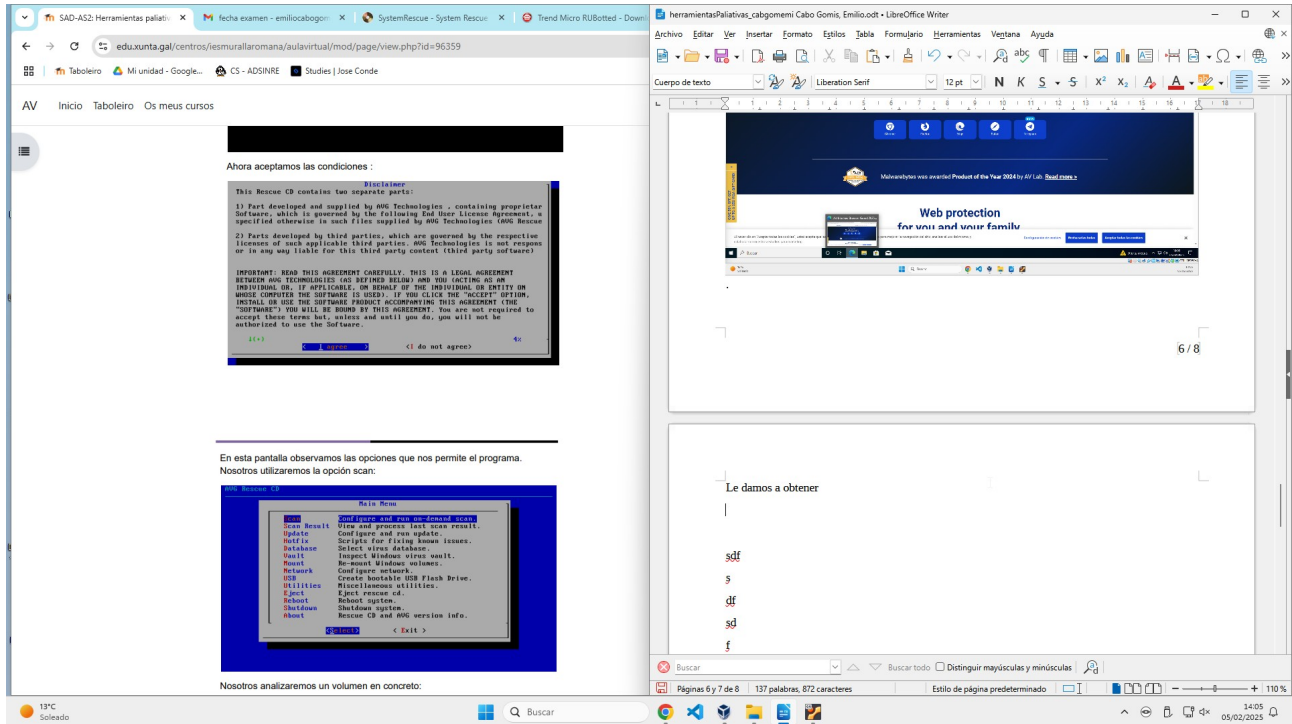

Buscamos el browserguard para edge

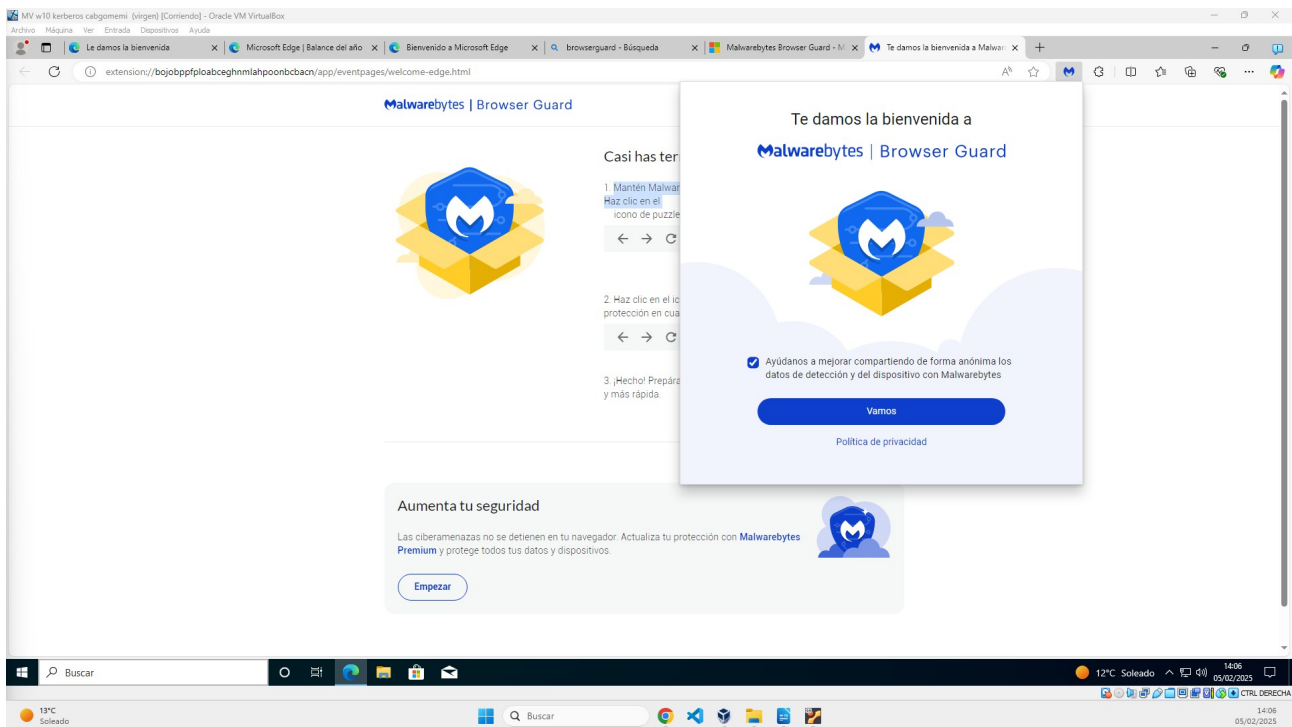

le damos a edge

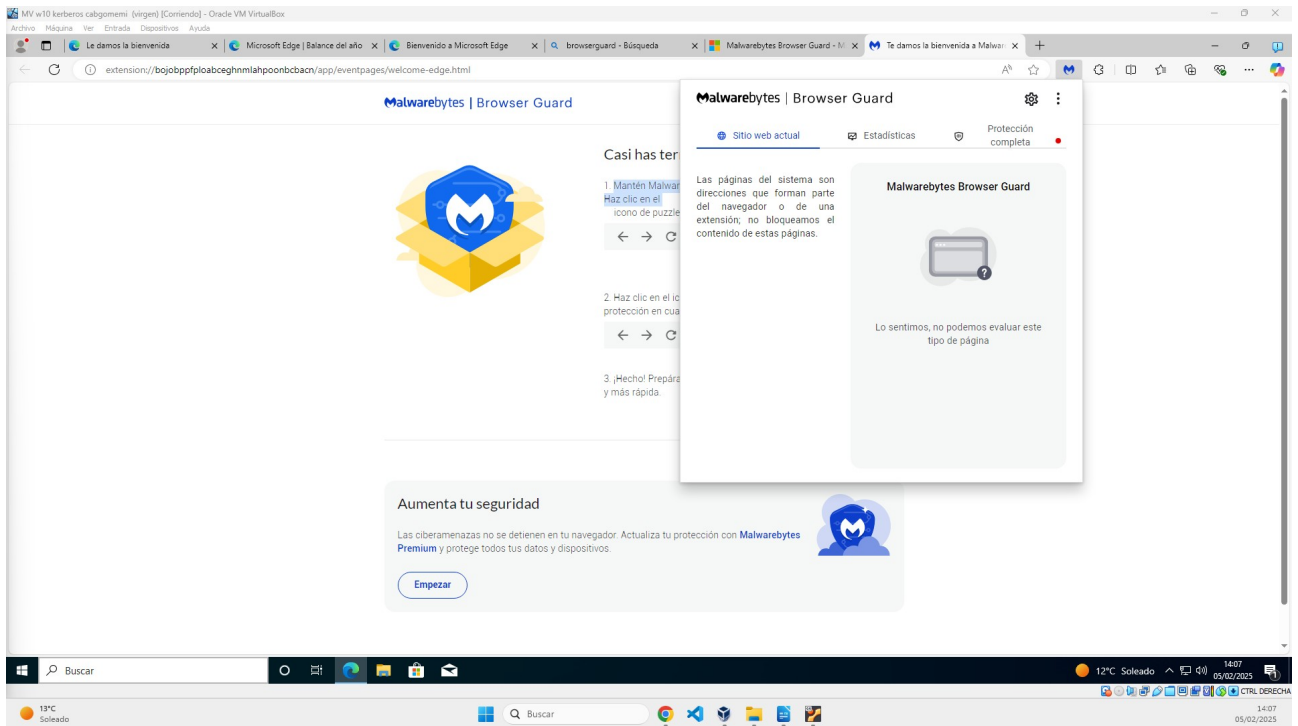

Le damos a obtener

ejecutamos browser guard.

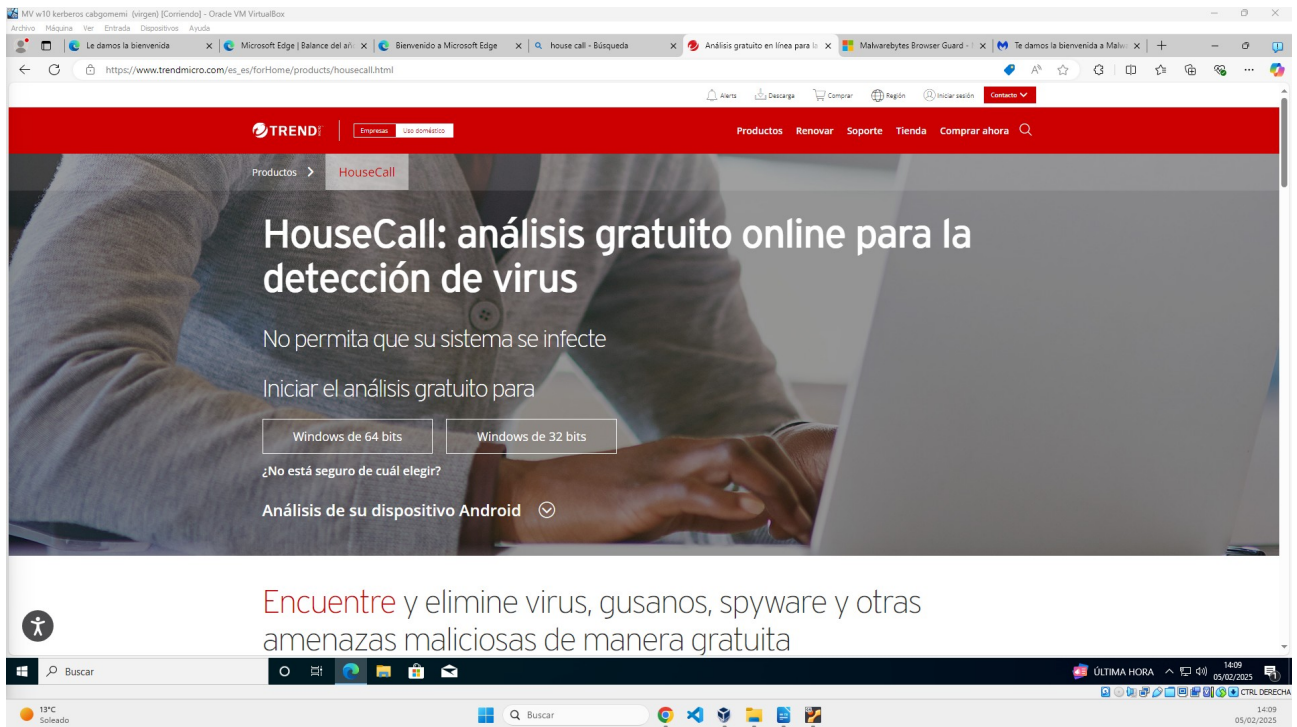

Browser guard ejecutandose.

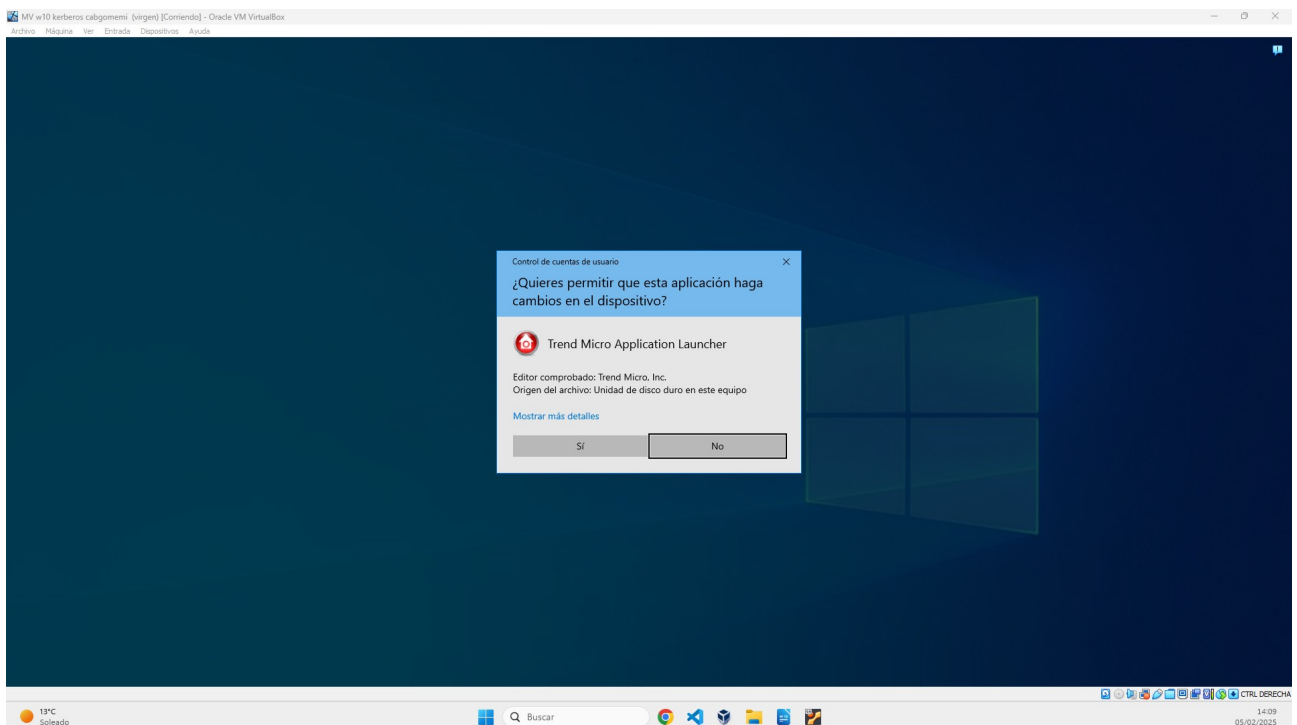

house call

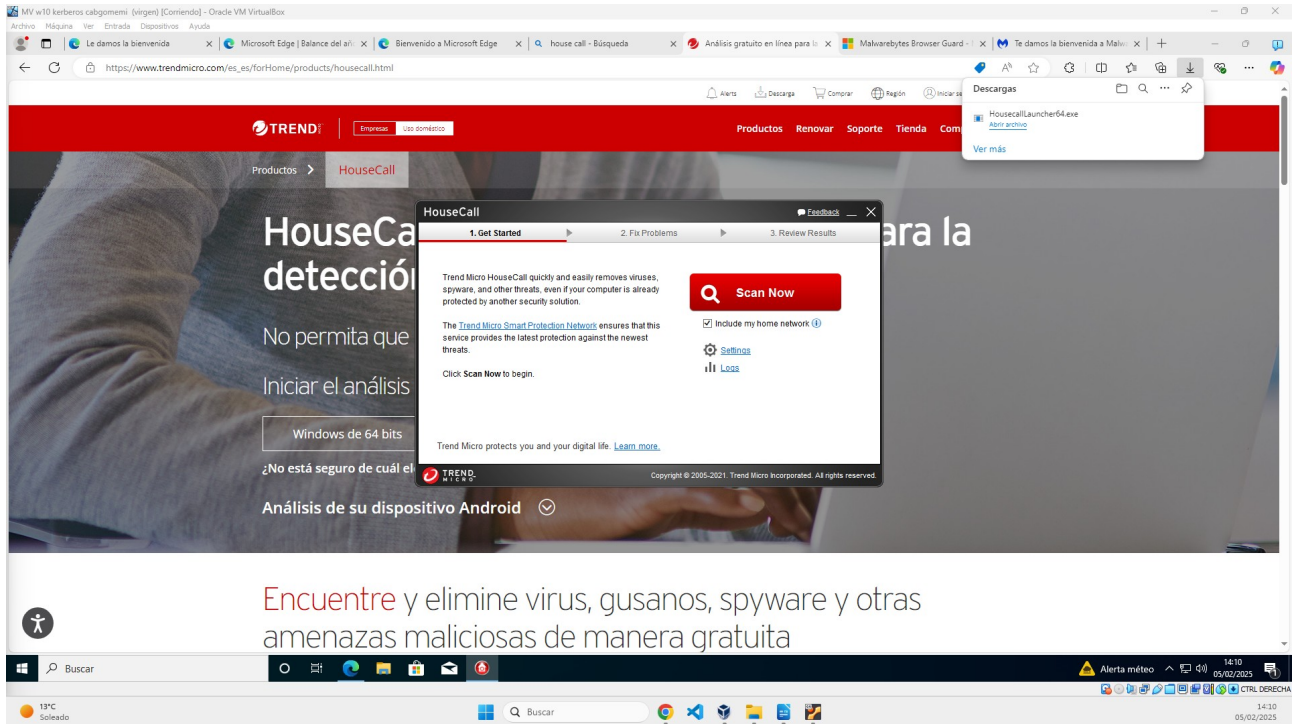

Descargamos el programa.

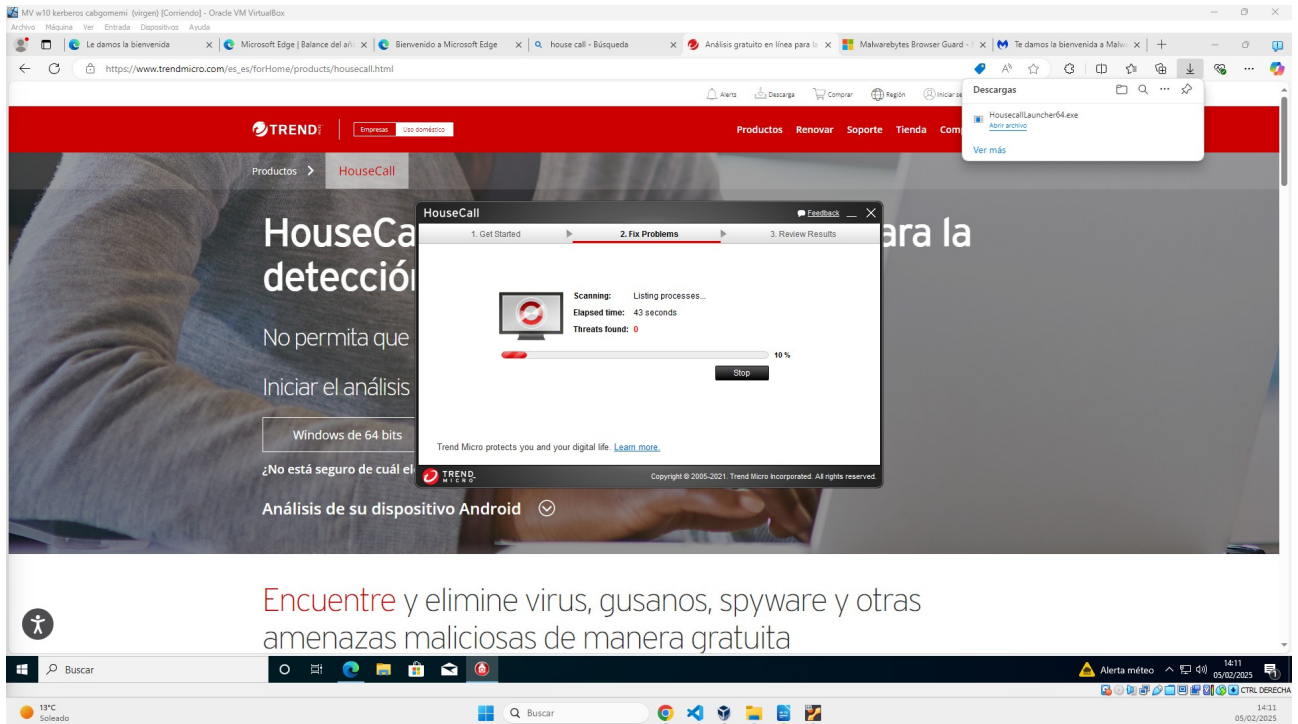

le damos si

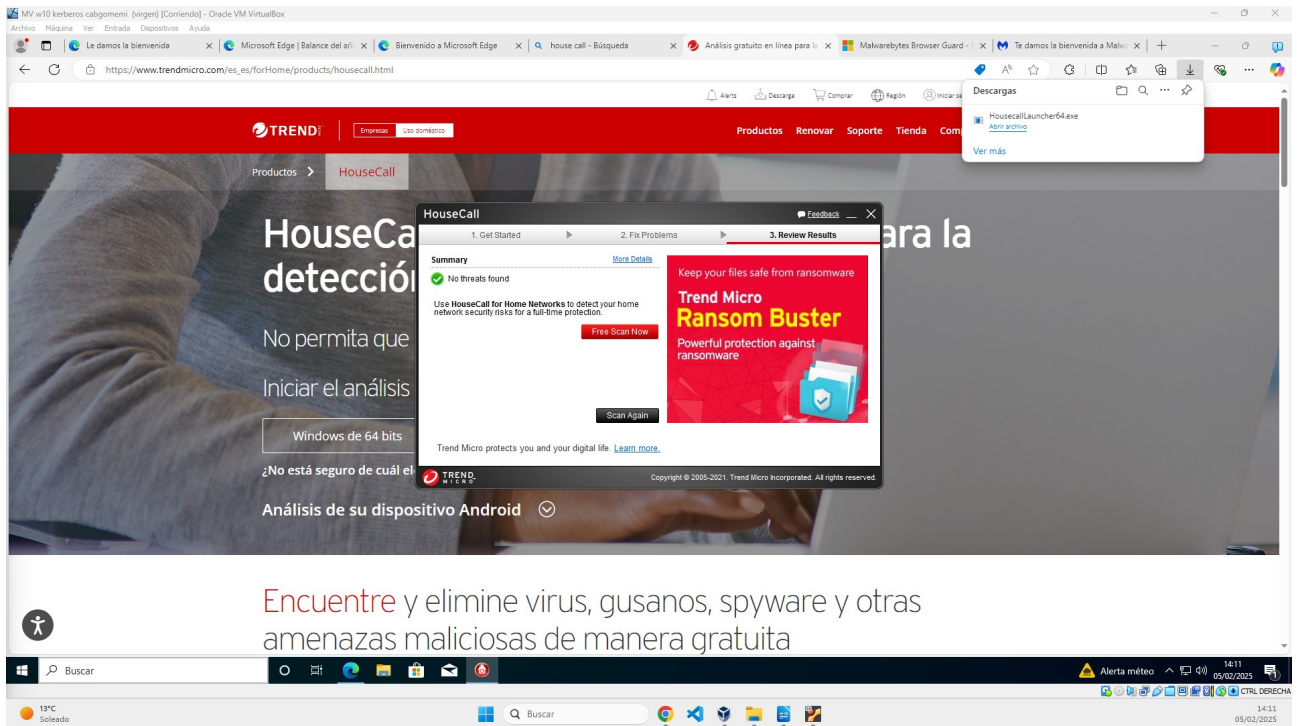

Le damos a scan now

se empieza a ejecutar.

No hay amenazas.
